

My Ambition of Life

My achievements may be described in a simple philosophy which belies my vision of life: yesterday, today, and tomorrow. The present is a vantage point, allowing me to see the events I have done that has led up to the present and from that experience, weave a path forward into a brighter future. All the courses and studies in math, science, fellowships, and the humanities I have undergone prior to the eleventh grade have served to prepare me for the present and give myself the opportunity to make a greater country for the next generations.

However, the quality of my future is dependent on the quality of the education I receive to prepare for it. I can only expect to be prosperous in college as in life if I receive a sound, solid foundation from which to rise and build upon. Therefore, I want to attend the School of Science and Math. My college achievement is directly proportional to the quality of education that I receive from high school--and the more enriched and nourishing it is, the better I will be able to learn, achieve, and offer something back to the community.

The education I will receive at the School of Science and Math will not only augment what I have already learned, it will expand my knowledge and open new fields of interest and exploration to me, fields that I will be able to advance in and, one day, achieve the ultimate challenge--becoming able to return something to mankind. For what other purpose is there a yesterday, today, and tomorrow than to be the best one can possibly be? At the School of Science and Math, I can work to my full potential and beyond.
